

Functional Document -- IBMS (Integrated Business Management Suite)

Field	Detail
Project Name	Integrated Business Management Suite (IBMS) v2.0
Team	Shivansh Srivastava (Product Developer), Prahallad Padhan (Product Owner), Ranveer Rai Khare (Scrum Master)
Sprint	Sprint 1
Date	April 12, 2026
Document Type	Functional Specification

1. Project Overview

IBMS is an AI-first Enterprise Resource Planning (ERP) platform built with **FastAPI** (Python). It provides real-time business dashboards, AI-powered analytics, risk scoring, fraud detection, compliance checking, budget optimization, and lead scoring -- all exposed via a REST/WebSocket API with a responsive single-page frontend.

1.1 Objectives

- * Deliver a unified business intelligence dashboard with real-time KPI tracking.
- * Provide AI/ML-powered services for forecasting, anomaly detection, and fraud prevention.
- * Enforce enterprise-grade security (JWT auth, TOTP 2FA, RBAC, CSRF, device fingerprinting).
- * Support multi-tier deployment (Docker, Kubernetes, AWS).
- * Enable real-time collaboration via WebSocket push updates.

2. Functional Requirements

2.1 Authentication & User Management

ID	Requirement	Status
----	-------------	--------

ID	Requirement	Status
FR-01	User registration with email and password	Completed
FR-02	User login with JWT access + refresh tokens	Completed
FR-03	TOTP-based Two-Factor Authentication (setup, confirm, disable)	Completed
FR-04	Role-Based Access Control (super_admin, admin, manager, analyst, viewer)	Completed
FR-05	Device fingerprint binding on login	Completed
FR-06	Password strength validation with policy enforcement	Completed
FR-07	Silent token refresh with rotation	Completed
FR-08	CSRF token generation and validation	Completed
FR-09	Audit logging for all auth events	Completed
FR-10	OAuth provider configuration endpoint	Completed
FR-11	Brute-force protection with IP-based rate limiting	Completed

2.2 Dashboard & KPI Module

ID	Requirement	Status
FR-12	Real-time KPI dashboard (revenue, margin, risk, compliance)	Completed
FR-13	KPI history with trend data points	Completed
FR-14	WebSocket-based live KPI push updates	Completed
FR-15	Auto-refresh KPI snapshots every 15 seconds	Completed
FR-16	Company-level KPI filtering	Completed

2.3 AI & Analytics Module

ID	Requirement	Status
FR-17	Sales forecasting with confidence interval bands	Completed
FR-18	AI-generated business insights (anomalies, trends, predictions)	Completed
FR-19	Active anomaly detection on transaction volume	Completed
FR-20	Natural language AI Copilot for business queries	Completed

2.4 Risk & Fraud Module

ID	Requirement	Status
FR-21	Transaction risk scoring (0-100) with factor breakdown	Completed
FR-22	Isolation Forest-based fraud detection with review flag	Completed
FR-23	Composite risk score (amount 50%, behavior 30%, compliance 20%)	Completed

2.5 Business Operations Module

ID	Requirement	Status
FR-24	Budget optimization with growth targets	Completed
FR-25	Compliance control-set evaluation (high-value approval checks)	Completed
FR-26	Dynamic pricing recommendation (demand/stock/competitor)	Completed
FR-27	Risk-based workflow decision engine (approve/review/reject)	Completed
FR-28	Lead scoring (55% engagement + 45% fit)	Completed
FR-29	Digital twin operational simulation	Completed
FR-30	Inventory reorder point prediction	Completed

2.6 System & Monitoring

ID	Requirement	Status
FR-31	Health check endpoint with Redis and uptime status	Completed
FR-32	System metrics (requests, errors, WS connections)	Completed
FR-33	Detailed system status with top endpoints and cache state	Completed
FR-34	Notification queue management	Completed
FR-35	Event stream with publish-subscribe routing	Completed

3. API Endpoint Summary

The application exposes **70+ API endpoints** across the following categories:

3.1 Authentication Endpoints (14 routes)

Method	Endpoint	Auth Required	Description
POST	<code>/api/auth/login`</code>	No	JWT login with device fingerprint + 2FA
POST	<code>/api/auth/register`</code>	No	New user registration
POST	<code>/api/auth/refresh`</code>	Cookie	Refresh token rotation
POST	<code>/api/auth/logout`</code>	Bearer	Revoke tokens, clear session
GET	<code>/api/auth/me`</code>	Bearer	Current user profile + permissions
GET	<code>/api/auth/csrf`</code>	Bearer	Generate CSRF token
POST	<code>/api/auth/2fa/setup`</code>	Bearer	Initialize TOTP 2FA
POST	<code>/api/auth/2fa/confirm`</code>	Bearer	Verify and enable 2FA
POST	<code>/api/auth/2fa/disable`</code>	Bearer	Disable 2FA
GET	<code>/api/auth/roles`</code>	Bearer	List roles with permissions
POST	<code>/api/auth/password-strength`</code>	No	Validate password against policy
POST	<code>/api/auth/token`</code>	No	Legacy token endpoint
POST	<code>/api/auth/validate`</code>	No	Legacy token validation
GET	<code>/api/auth/oauth-config`</code>	No	OAuth provider configuration

3.2 Dashboard & KPI Endpoints (3 routes)

Method	Endpoint	Auth Required	Description
GET	<code>/api/dashboard`</code>	No	Real-time KPI snapshot
GET	<code>/api/dashboard/history`</code>	No	Historical KPI trend data
WebSocket	<code>/ws/kpi`</code>	Token (query)	Live KPI push updates

3.3 AI & Analytics Endpoints (4 routes)

Method	Endpoint	Auth Required	Description
POST	`/api/forecast`	No	Sales forecast with CI bands
GET	`/api/ai/insights`	No	AI-generated business insights
GET	`/api/ai/anomalies`	No	Active anomaly detection results
POST	`/api/copilot/ask`	No	Natural language business queries

3.4 Risk, Fraud & Business Endpoints (7 routes)

Method	Endpoint	Auth Required	Description
POST	`/api/risk/score`	No	Transaction risk scoring
POST	`/api/fraud/detect`	No	Isolation Forest fraud detection
POST	`/api/risk/composite`	No	Multi-factor composite risk
POST	`/api/budget/optimize`	No	Budget allocation optimization
POST	`/api/compliance/check`	No	Control-set compliance evaluation
POST	`/api/pricing/suggest`	No	Dynamic pricing recommendation
POST	`/api/decision/evaluate`	No	Risk-based workflow decision
POST	`/api/leads/score`	No	Lead qualification scoring
POST	`/api/twin/simulate`	No	Digital twin simulation
POST	`/api/inventory/predict`	No	Inventory reorder prediction

3.5 System Endpoints (5 routes)

Method	Endpoint	Auth Required	Description
GET	`/api/health`	No	Health check with uptime stats
GET	`/api/metrics`	No	System metrics snapshot
GET	`/api/system/status`	No	Detailed system status
GET	`/api/notifications`	Bearer	Notification queue (paginated)
GET	`/api/audit/log`	Bearer + RBAC	Audit event log (audit.view)

Method	Endpoint	Auth Required	Description
GET	`/api/endpoints`	No	List all API routes

4. User Roles & Permissions

Role	Permissions	Inherits From
super_admin	Full access (`*`)	--
admin	dashboard, users, reports, settings, api, ai, risk, compliance, audit	--
manager	reports.export, risk.manage, compliance.manage, budget.approve, leads.manage, pricing.manage	analyst
analyst	reports.view, ai.view, risk.view, compliance.view, forecast.view, copilot.use	viewer
viewer	dashboard.view, kpi.view	--

5. Frontend Features

Feature	Description
Login / Register UI	Auth overlay with username/password, TOTP 2FA field, password strength meter
Real-Time Dashboard	KPI card grid with live WebSocket updates, animated counters
Forecast Chart	Chart.js integration with confidence interval visualization
Sidebar Navigation	11 pages: Dashboard, Analytics, AI Insights, Risk & Fraud, Compliance, Pricing, Budget, Leads, Events, Health, Audit
Theme Toggle	Dark/light mode with persistent state
Toast Notifications	Max 5 concurrent, 5-second auto-dismiss
Token Management	Silent refresh, auto-logout, CSRF injection

Feature	Description
WebSocket Connection	Auto-reconnect with exponential backoff, health indicator
3D Tilt Effects	GPU-accelerated animations on KPI spotlight cards
Reduced Motion Support	Respects `prefers-reduced-motion` media query
Mobile Responsive	Collapsible sidebar, responsive grid layout

6. Non-Functional Requirements

Requirement	Implementation
Performance	15-second KPI refresh cycle; Redis caching with in-memory fallback
Security	JWT + 2FA, RBAC, CSRF, rate limiting, device binding, audit logging
Availability	K8s 3-replica deployment, health/readiness probes, auto-restart
Scalability	Stateless API, Redis cache, K8s horizontal scaling
Observability	Trace IDs on all requests, metrics endpoint, response timing headers
Compliance	Audit log, compliance engine, control-set evaluation

7. Technology Stack

Layer	Technology
Backend	FastAPI (Python 3.11), Uvicorn ASGI
Frontend	Vanilla JavaScript, HTML5, CSS3, Chart.js
Authentication	JWT (HS256), TOTP (pyotp), bcrypt/PBKDF2
Database	MariaDB 10.6 (via Frappe ORM), Redis 7 (cache)
Containers	Docker, Docker Compose, Kubernetes
Infrastructure	Terraform (AWS: VPC, RDS, ElastiCache)

Layer	Technology
Reverse Proxy	Nginx (Alpine)
AI/ML	Prophet (forecasting), Isolation Forest (fraud)
CI/CD	GitHub Actions, GitHub Container Registry (ghcr.io)

Document Version 1.0 -- Sprint 1 Review
